

2,500 kg Polyester Ratchet

Our Ratchet Straps are manufactured to AS/NZS 4380:2001 featuring double cross stitching on all joins.

1 Custom handles

The handles are a custom designed round "comfort" handle to reduce injury and fatigue.

2 Protective sleeves

Each ratchet if supplied with two friction sleeves to protect the polyester strap.

3 double stitched

Our Ratchet Straps are manufactured to AS/NZS 4380:2001 featuring double cross stitching on all joins.

Who We Are

Thylacine International is a family owned company established in 2014 initially to provide a lower cost alternative for imported components.

As a result of enquires from Break bulk exporters the decision was made to offer the benefit of many years' experience in the shipping, stevedoring and marine surveying industries to address securing issues.

INTERNATIONAL

2,500 kg AXEL Straps

Axel straps are manufactured to AS/NZS4380:2001, featuring triple stitching and double friction protection inside the eyes – rated at 2,500 kilograms

1 in house

The axels straps were designed in house to provide a solution for in-gauge cargo being declared over width due to the positioning of ratchet load binders.

Who We Are

Thylacine International is a family owned company established in 2014 initially to provide a lower cost alternative for imported components.

As a result of enquires from a number of break bulk exporters the decision was made to offer the benefit of over forty years' experience in the shipping, stevedoring and marine surveying industries.

2 COST SAVING DESIGN

The usual practice is for the hook and keeper to be secured to lashing points on the flat racks, when tensioned the ratchet handle protrudes outside the parameters of the flat rack resulting in over dimensional charges.

To address this costly issue one eye of the axel strap is passed through the lashing point and the two eyes connected to the hook and keeper on the ratchet which is then tensioned resulting the ratchet being in gauge.
